Ouachita Parish Assessor Introduces New Integrated Imagery via Online Public Search

Monroe, La. –

Ouachita Parish Assessor, Stephanie Smith, is excited to announce the integration of EagleView oblique imagery into the free online public record search, actDataScout.com. This integration at no charge to the public is the first of its kind in the state. Smith has been intentional in providing transparency with her office.

Currently, the parish displays EagleView ortho imagery, which is the top-down aerial imagery. Where available, this newly integrated service using oblique imagery will provide a 360-degree view of properties and parcels, enabling professionals such as appraisers, real estate, home improvement specialists to get a full perspective of a property, and associated dwellings. In addition to the 360-degree imagery, more years of historical imagery will be available to see market growth areas and changes in subject properties.

Smith stated, "Since Oblique imagery is now essential to discovering and valuing property in our office, it was only natural to provide this advanced technology on our website as soon as the opportunity was presented. Any time we can offer the public easy and efficient access to the resources of information available in the Assessor's office, I feel it is our duty to do just that." She is grateful of the partnership between two of her vendors to provide this advanced service to the public.

To access the newly available imagery, visit actDataScout.com, select 'Ouachita' under the Real Property tab, and navigate to the map. Once a property is selected, an EagleView button will appear in the toolbar, displaying available imagery and a compass tool that rotates the map view.
